

Isaac Jung

Los Angeles, CA | iwjung@andrew.cmu.edu | (909) 536-8886 | [linkedin.com/in/isaacwjung](https://www.linkedin.com/in/isaacwjung) | github.com/iwjung55

EDUCATION

Carnegie Mellon University

Bachelor of Science in Statistics and Machine Learning

Relevant Courses: Fundamentals of Programming, Methods for Statistics and Data Science, Concepts of Mathematics, Reasoning with Data, Statistics of Sports Betting, Linear Algebra

Expected 2028

Pittsburgh, PA

WORK EXPERIENCE

Adobe

Incoming Student Ambassador

July 2026 – Present

Pittsburgh, PA

Carnegie Mellon University

Undergraduate Research Assistant, LLM Safety & Benchmark

March 2026 – May 2026

Pittsburgh, PA

- Evaluated 5,000+ adversarial prompts across 50+ LLM benchmarks on hugging face for misuse risk
- Assessed robustness of 50 AI safety evaluation methods to identify gaps in automated risk detection
- Recorded 35+ recurring failure patterns and edge cases, driving improvements to benchmark design

CMU Business Technology Group

Data Analyst

January 2026 – Present

Pittsburgh, PA

- Built predictive models in scikit-learn on 1,000+ users to forecast engagement and segment behavior patterns
- Developed 20+ Python visualizations translating model output into recurring business and engineering teams
- Engineered data-cleaning pipelines for 3,000+ raw, unstructured entries for high-fidelity, reproducible reporting

CMU Students Using Data For Social Good

Data Analyst

January 2026 – Present

Pittsburgh, PA

- Analyzed 20+ nonprofit and community datasets in Python and R to build outcome metrics for organizations
- Cleaned and standardized 1,000+ records across partner data sources, resolving inconsistent reporting formats
- Built 3 Tableau dashboards tracking program outcomes used in grant applications to support funding requests

Carnegie Mellon University

Mathematics Research Fellow

May 2026 – Present

Pittsburgh, PA

- Conducted 10-week research under Richard Statman on combinatory logic and functional programming
- Applied lambda calculus reduction techniques to a Turing machine problem in combinatory logic

PROJECTS

ArbBot – Prediction Market Analytics & Arbitrage Engine

Python (pandas, NumPy) | APIs | Statistical Modeling | R

June 2026 – Present

Los Angeles, CA

- Built a Python pipeline pulling live Kalshi/ Polymarket data via APIs on a 5-second rescan cycle to flag arbitrage
- Modeled expected value and ranked 1,000+ markets by statistical edge via EDA and historical backtesting

United Nations x Databricks Datathon – Humanitarian Crisis Funding Analysis

Python (pandas, NumPy) | Databricks | Geospatial EDA & Visualization

March 2026

Pittsburgh, PA

- Built a Databricks model scanning 100+ crises across 50 countries to flag the most affected, underfunded regions
- Scored funding adequacy across 15+ aid tags, built geospatial heatmap ranking 100+ crises by funding shortfall

AWARDS

Carnegie Mellon MSCF Rotman Trading Competition

2nd Place, Arbitrage Case

September 2025

Pittsburgh, PA

- Placed 2nd of 50 teams by building a rules-based arbitrage strategy on mispricing in a simulated market
- Captured \$200K in simulated profit from price discrepancies, then hedged the position to preserve profits

SKILLS

Languages: Python, R, SQL, JavaScript

Methods: Exploratory Data Analysis, Statistical Modeling, Regression, Hypothesis Testing, A/B Testing, Data Cleaning

Libraries & Tools: pandas, NumPy, scikit-learn, Matplotlib, Tableau, Databricks, Excel, Git, Jupyter

Spoken: English, Korean, French
